Printed in Great Britain

Contents of Volume 75

Number 1, 7 November 1978

DUERDEN, M. and JONES, M. N., Amphipathicity and Aggregation in Polypeptide and Protein Systems 1

ROSE, M. R., Cheating in Evolutionary Games 21

LANCASTER, J. R., Site-exposure Model for Proton–Lactose Symport in *Escherichia coli* 35

BUNOW, B., Chemical Reactions and Membranes: A Macroscopic Basis for Facilitated Transport, Chemiosmosis and Active Transport. Part I: Linear Analysis 51

BUNOW, B., Chemical Reactions and Membranes: A Macroscopic Basis for Active Transport. II. Non-linear Aspects . . . 79

AINSWORTH, S. and GREGORY, R. B., The Exponential Model for a Regulatory Enzyme: Its Extension to Describe the Binding of Two Ligands 97

HEUCH, I., Maintenance of Butterfly Populations with All-female Broods under Recurrent Extinction and Recolonization . . 115

CATALANO, G. and EILBECK, J. C., A Mathematical Model for Embryonic Cell Division Based on a Surface "Cleavage Field" . . . 123

LETTER TO THE EDITOR

BOARD, P. G. and SMITH, J. E., Energy Cost of the Modified γGlutamyl Cycle 139

Number 2, 21 November 1978

MCGUIRE, J. B. and THOMPSON, C. J., On the Reconstruction of an Evolutionary Order 141

SIBATANI, A., A Bifurcation Model for Developmental Processes . 149

VON HEIJNE, G., LEIMAR, O. and BLOMBERG, C., On the Emergence of New Function in Primitive Proteins 167

MURA, U. and BAUER, C., pH Influence on Enzymatic Activity: The Involvement of Two Active Ionized Forms of Either Substrate or Enzyme in the Reaction 181

ZS.-NAGY, I., A Membrane Hypothesis of Aging 189

KARLIN, S. and CARMELLI, D., Evolutionary Aspects and Sensitivity Studies of Some Major Gene Models 197

NISBET, R. M., GURNEY, W. S. C. and PETTIPHER, M. A., Environmental Fluctuations and the Theory of the Ecological Niche . 223

LETTERS TO THE EDITOR

RAKITZIS, E. T., Kinetics of Irreversible Enzyme Inhibition by an Unstable Inhibitor: Co-operative Effects 239

REIJNDERS, L., On the Applicability of Game Theory to Evolution 245

Number 3, 7 December 1978

MIMURA, M. and MURRAY, J. D., On a Diffusive Prey–Predator Model Which Exhibits Patchiness 249

TEXTER, J. and SUTHERLAND, J. C., The Distribution of Pyrimidine Tracts in DNA can be Calculated from Nearest Neighbor Frequencies 263

WHISLER, J. W. and JOHNSTON, D., Epileptogenesis: A Model for the Involvement of Slow Membrane Events and Extracellular Potassium 271

OSTROUMOV, S. A., Membrane Potential and Surface Charge Densities as Possible Generalized Regulators of Membrane Protein Activities 289

HONIG, B. and STEIN, W. D., Design Principles for Active Transport Systems 299

LEFEBVRE, G. M., The Time Dependence of Bacterial Spore Germination 307

COOPER, W. E., Jr, Home Range Size and Population Dynamics . 327

BECKER, Y., A Model for Intramolecular Recombination of Herpesvirus DNA Leading to the Formation of Circular, Circular-linear and Fragmented Genomes 339

GRESSEL, J. and SEGEL, L. A., The Paucity of Plants Evolving Genetic Resistance to Herbicides: Possible Reasons and Implications . 349

DOLOWY, K. and HOLLY, F. J., Contribution of Interfacial Tension Changes During Cellular Interaction to the Energy Balance . 373

LEVIN, G. V., STRAAT, P. A. and BENTON, W. D., Color and Feature Changes at Mars Viking Lander Site 381

Number 4, 21 December 1978

HILL, T. L., Effect of Enzyme–Enzyme Interactions on Steady-State Enzyme Kinetics. IV. "Strictly Steady-State" Examples . . 391

SHINE, R., Propagule Size and Parental Care: The "Safe Harbor" Hypothesis 417

GLADYSHEV, G. P., On the Thermodynamics of Biological Evolution . 425

BODDINGTON, M. J., An Absolute Metabolic Scope for Activity. . . 443

CHARNOV, E. L., Evolution of Eusocial Behavior: Offspring Choice or Parental Parasitism? 451

GOCHLERNER, G. B., Free Oxygen and Evolutionary Progress . . 467

BECK, J. S., Relations Between Membrane Monolayers in Some Red Cell Shape Transformations 487

JUDD, C. T. and INGRAHAM, L. L., Molecular Orbital Study of Optical Rotation in a Vitamin B_6 Enzyme 503

HASTINGS, A., An Evolutionary Optimization Principle . . . 519

HASTINGS, A., Evolutionarily Stable Strategies and the Evolution of Life History Strategies: I. Density Dependent Models . . 527

Index to Volume 75

Active transport, chemiosmosis and facilitated transport, a macroscopic basis for, Part 1. Linear analysis, chemical reactions and membranes, 51
Active transport, a macroscopic basis for II. Non-linear aspects, chemical reactions and membranes, 79
Active transport systems, design principles for, 299
Aggregation and amphipathicity in polypeptide and protein systems, 1
Aging, a membrane hypothesis of, 189
AINSWORTH, S. and GREGORY, R. B., The exponential model for a regulatory enzyme: its extension to describe the binding of two ligands, 97
Amphipicithaty and aggregation in polypeptide and protein systems, 1

Bacterial spore germination, the time dependence of, 307
BAUER, C. (see MURA, U.), 181
BECK, J. S., Relations between membrane monolayers in some red cell shape transformations, 487
BECKER, V., A model for intramolecular recombination of herpes-virus DNA leading to the formation of circular, circular-linear and fragmented genomes, 339
BENTON, W. D. (see LEVIN, G. V.), 381
Biological evolution, on the thermodynamics of, 425
BLOMBERG, C. (see VON HEIJNE, G.), 167
BOARD, P. G. and SMITH, J. E., Energy cost of the modified γ-glutamyl cycle (letter), 139
BODDINGTON, M. J., An absolute metabolic scope for activity, 443
BUNOW, B., Chemical reactions and membranes: a macroscopic basis for facilitated transport, chemiosmosis and active transport. Part I: Linear analysis, 51
BUNOW, B., Chemical reactions and membranes: a macroscopic basis for active transport. II, Non-linear aspects, 79
Butterfly populations with all-female broods under recurrent extinction and recolonization, maintenance of, 115

CARMELLI, D. (KARLIN, S.), 197
CATALANO, G. and EILBECK, J. C., A mathematical model for embryonic cell division based on a surface "cleavage field", 123
Cell division based on a surface "cleavage field", a mathematical model for embryonic, 123
Cell shape transformations, relations between membrane monolayers in some red, 487
Cellular interaction to the energy balance, contribution of interfacial tension changes during, 373
CHARNOV, E. L., Evolution of eusocial behavior: offspring choice or parental parasitism?, 451
Chemiosmosis, facilitated transport and active transport, a macroscopic basis for, Part I: Linear analysis, chemical reactions and membranes, 51
"Cleavage field", a mathematical model for embryonic cell division based on a surface, 123
COOPER, W. E., Jr, Home range size and population dynamics, 327

DNA leading to the formation of circular, circular-linear and fragmented genomes, a model for intramolecular recombination of herpes-virus, 339
DNA can be calculated from nearest neighbor frequencies, the distribution of pyrimidine tracts in, 263
Developmental processes, a bifurcation model for, 149
DOLOWY, K. and HOLLY, F. J., Contribution of interfacial tension changes during cellular interaction to the energy balance, 373
DUERDEN, M. and JONES, M. N., Amphipathicity and aggregation in polypeptide and protein systems, 1

Ecological niche, environmental fluctuations and the theory of the, 223
EILBECK, J. C. (see CATALANO, G.), 123
Energy balance, contribution of interfacial tension changes during cellular interaction to the, 373
Environmental fluctuations and the theory of the ecological niche, 223
Enzymatic activity, pH influence on: the involvement of two active ionized forms of either substrate or enzyme in the reaction, 181
Enzyme, the exponential model for a regulatory: its extension to describe the binding of two ligands, 97
Enzyme inhibition n by an unstable inhibitor: co-operative effects, kinetics of irreversible (letter), 239
Enzyme–enzyme interactions on steady-state enzyme kinetics. IV. "Strictly steady state" examples, effect of, 391
Enzyme kinetics. IV. "Strictly steady-state" examples, effect of enzyme–enzyme interactions on steady-state, 391
Enzyme, molecular orbital study of optical rotation in a vitamin B_6, 503
Epileptogenesis: a model for the involvement of slow membrane events and extracellular potassium, 271
Escherichia coli, site-exposure model for proton–lactose symport in, 35
Evolution, on the applicability of game theory to (letter), 245
Evolution of eusocial behavior: offspring choice or parental parasitism? 451
Evolutionary games, cheating in, 21
Evolutionary order, on the reconstruction of an, 141
Evolution of life history strategies I. Density dependent models, evolutionarily stable strategies and the, 527
Evolutionary aspects and sensitivity studies of some major gene models, 197
Evolutionary progress, free oxygen and, 467
Evolutionary optimization principle, 519
Evolutionarily stable strategies and the evolution of life history strategies I. Density dependent models, 527

Gene models, evolutionary aspects and sensitivity studies of some major, 197
Genetic resistance to herbicides: possible reasons and implications, the paucity of plants evolving, 349
Genomes, a model for intramolecular recombination of herpes-virus DNA leading to the formation of circular, circular-linear and fragmented, 339
GLADYSHEV, G. P., On the thermodynamics of biological evolution, 425
γ-Glutamyl cycle, energy cost of the modified (letter), 139
GOCHLERNER, G. B., Free oxygen and evolutionary progress, 467

GREGORY, R. B. (see AINSWORTH, S.), 97
GRESSEL, J. and SEGEL, L. A., The paucity of plants evolving genetic resistance to herbicides: possible reasons and implications, 349
